

CMNRH Pre-competition Spec Check

For the second year, the Central MN Robotics Hub is helping teams meet specs for this year's game. The people helping with the event are meant to aid teams in the build process and prepare for Week Zero events as well as the Regional events.

Experts on site will also be volunteering in various roles at the MN Regionals.

We will have the following help onsite:

- Lead Robot Inspector
- Control System Advisor
- Programming:
 - Java and C++ Expert
 - Labview help

Last year every team that attended found some area of trouble and were able to fix the issues before Week Zero competitions; most were able to fix the issues at the site before they left.

Please note that even though LRI's and CSA's are looking over your robot, you will still have to go through inspections at your competition. Any inspections (including this one) done before competition are not official.

When: From 5:30-10PM On Friday, February 10, 2017

Where: Becker High School, 12000 Hancock Street, Becker, MN 55308

Please RSVP to:
